

Test Summary Report - Flipkart Manual Testing

Test Summary Report - Flipkart Manual Testing

Project: Flipkart Website - Manual Testing

Tester: Vennapusa Manisha Reddy

Duration: (e.g., 7 days testing during practice)

Environment: Production / Staging URL: <https://www.flipkart.com>

Browsers: Chrome (latest), Firefox (latest), Edge

Device Viewports: Desktop, Tablet, Mobile

Summary:

- Total Test Scenarios: 30+ (See Test_Scenarios_Flipkart.pdf)
- Total Test Cases Executed: 42
- Test Cases Passed: TBD during actual testing
- Test Cases Failed: TBD during actual testing
- Critical Defects Found: TBD
- Major Defects Found: TBD

Key Observations (examples):

1. Search and filters work as expected for common queries.
2. PDP displays images and price; need to verify consistency across pages.
3. Payment flows need simulation in test environment.
4. Address and checkout flows must be verified for edge cases.
5. Performance on homepage may vary; recommend basic performance checks.

Recommendations:

- Perform regression testing after release.
- Run smoke tests on checkout and payment flows before production push.
- Automate frequent flows like login, search, add-to-cart in future (Selenium).
